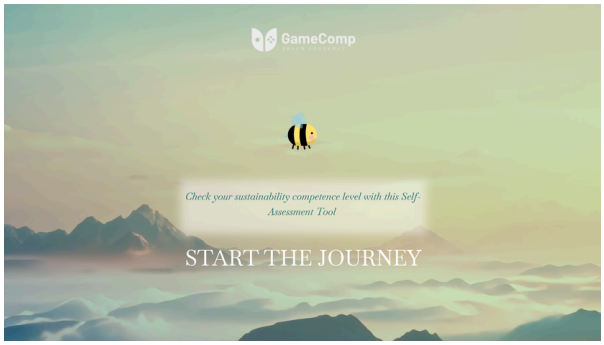
DEVELOPMENT OF THE SUSTAINABILITY COMPETENCE ASSESSMENT TOOL

2#Newsletter

September 2024

We are excited to share the latest progress of the GameComp project, which is currently in a key phase: the development of the Sustainability Competence Assessment Tool.

GameComp's Sustainability Competence Assessment Tool is an innovative tool that has a clear objective: to enable young people to quickly, entertainingly and effectively assess their skills, attitudes and knowledge in all the 12 sustainability competence defined by the GreenComp framework.



Through this assessment, young people can easily evaluate their sustainability competencies by answering 36 self-reflective questions. Based on their progress, they will earn badges and points, receive a level designation, and obtain personalized feedback upon completion.

Project Overview

The project aims to increase the capacity of youth workers to equip young people with the skills and knowledge necessary for the green transition.

Specific objectives of this tool:

- To create an online assessment tool that evaluates the sustainability competences of young people in an attractive and engaging way, according to the 12 competences defined by GreenComp.
- To enable youth workers to assess in detail the competences of each young person in an appealing and comprehensive way.
- To enable young people to self-assess their competences and to receive personalised feedback on how to improve them.

Pilot:

2#Newsletter

September 2024

As an essential part of the development process, we are conducting a pilot phase to test and improve the tool before its official launch. This pilot is divided into two phases:

- Internal Pilot: In this phase, we have involved the experts who are part of our team. They are using the tool and providing us with detailed feedback to fine-tune its functionalities and ensure that it meets the highest quality standards.

- External Pilot: It will involve the participation of the stakeholders: 50 young people and 50 youth workers. This external pilot will allow us to get direct feedback from those who will benefit most from the tool. Both young people and youth workers will test the tool, providing us with valuable feedback to identify improvements and better adapt the content to the user's needs.

What is GreenComp?

The tool is based on the GreenComp competences framework, a fundamental framework for the development of sustainable competences. GreenComp is the European competency framework on sustainability and is designed to promote the acquisition of skills and attitudes necessary for the green transition, identifying 12 key competences.

This framework seeks to support all educators and learners in embedding environmental sustainability topics into all educational systems in the European Union.
